## NATURAL REFRIGERANT

R290

TECUMSEH's commitments to the planet and facilitating the energy transition are strong and concrete. Historically, the company has developed innovative solutions to effectively reduce carbon dioxide emissions and promoted the use of low-GWP refrigerants. Our offers are eco-friendly and meet the high requirements of the eco design directive UE2015-1095.

European regulation F-gas 517/2014 defined the CO<sub>2</sub> emission reduction volumes; it drastically reduces the use of HFCs (hydrofluorocarbons) since 2015 with an accentuated decrease from 2018. Standards EN60335-2 and EN 378 defines safety and environmental requirements.

The switchover to fluids with GWP < 150 offers Tecumseh a further reason to innovate and improve its proposal for technical solutions.

R290, natural refrigerant, is a long term solution. It allows a proven reduction of energy consumption of refrigeration systems compared to traditional refrigerants. Due to better thermal properties, it has higher energy efficiency when compared to R404A, R134a. The tests carried out show a significant decrease in the refrigerant charge required for the operation of the installation. It is a natural continuity of the solutions for direct relaxation for the refrigeration housed groups.

For several months, Tecumseh has been working to validate a complete offer with R290 in commercial refrigeration. This brochure is the results of it. The ranges presented meet the criteria of safety, performance, economy, reliability and respect of the environment you are expecting from the Tecumseh.

## ► CONVERSION TABLES

### Conversion Examples from R404A to R290 (50Hz) - LBP & LMBP applications EN12900

*Evaporation temp. -35°C, condensing temp. 40°C, return gas temp. 20°C, subcooling 0K*

## Traditional Condensing Units

## ► APPLICATIONS CASE STUDIES

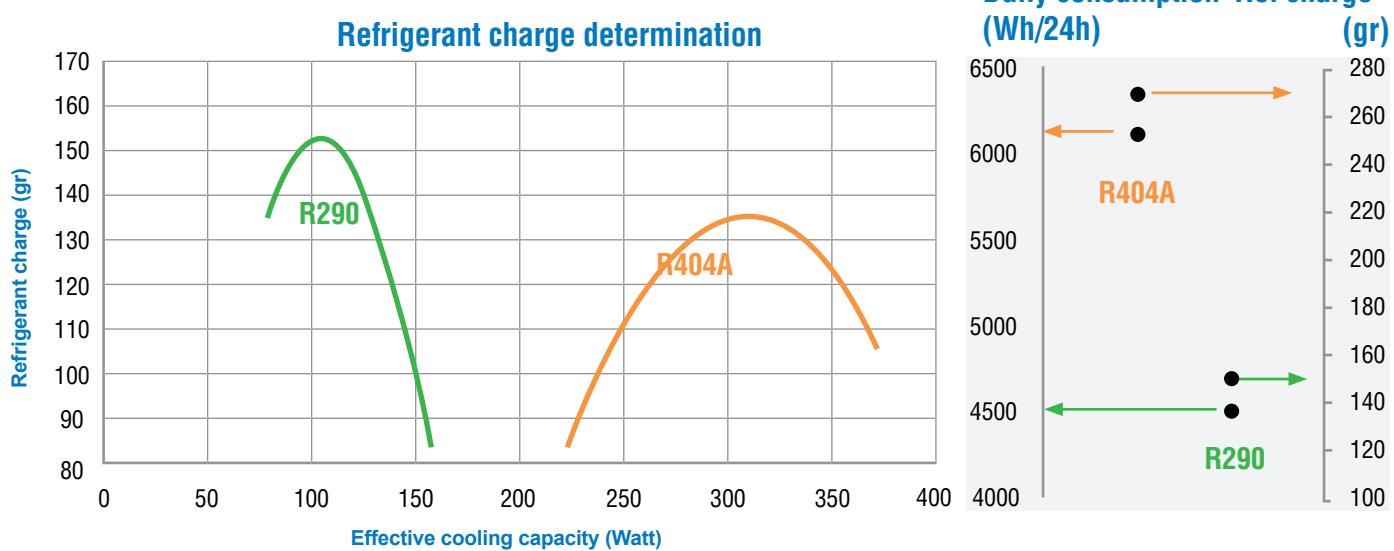

### NEGATIVE TEMP - REACH IN CABINET

- Internal volume = 570 L
- Measurements carried out with hermetic compressors
- R290 compressor, model AE2420U-FZ

The cabinet was retrofitted-adapted to the R290 refrigerant. The originally R404A competitor compressor is replaced by an optimized R290 compressor: AE2420U-FZ. The capillary tube and the refrigerant charge are optimized. Heat exchangers and the boiler are unchanged.

Thanks to the R290 properties and to the compressor characteristics:

- The end user saves **26,3% of energy cost**
- **The cabinet cooling capacity and the pull down duration are unchanged**
- The R290 charge is **45% lower than the R404A one** thanks to its R290 density.

### POSITIVE TEMP – ICE MACHINE

- 24 Kg/day
- Measurements carried out with hermetic compressors at ambient air and water temperatures 30°C/15°C or 15°C/10°C
- TC4425U-GS running R290

The ice cube maker was retrofitted - adapted to the R290 refrigerant. The originally R404A competitor compressor is replaced by an optimized R290 compressor: TC4425U-GS. The capillary tube and the refrigerant charge are optimized.

Heat exchangers are unchanged.

Thanks to the R290 properties and to the compressor characteristics

- The ice cube production increases by **6%**
- The application energy consumption reduces by **4%**

The R290 charge is **42% lower than R404A** thanks to its R290 density.

R290 REFRIGERANT CHARGE	ICE PRODUCTION (KG/DAY)
59	19.8
68	20.7
73	21.2
78	20.5

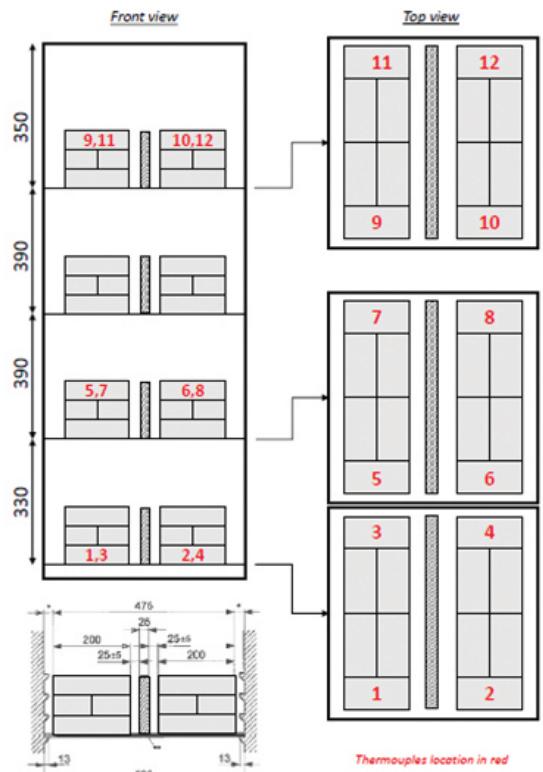

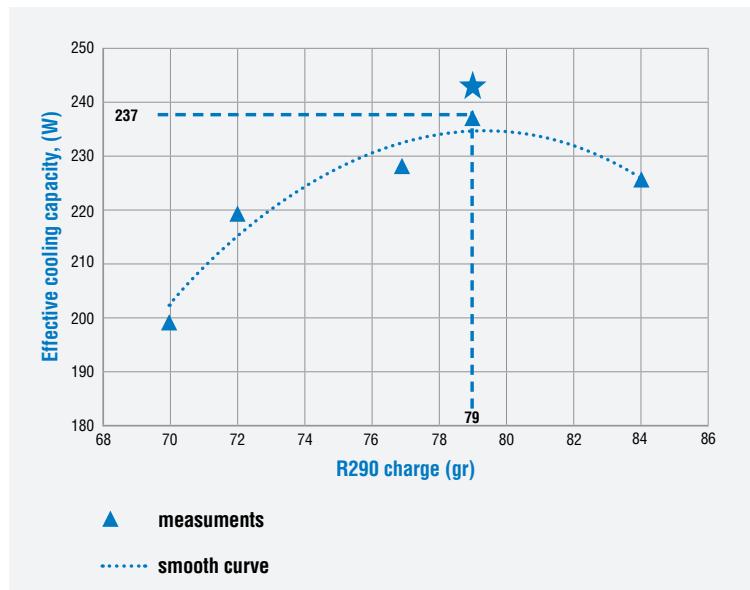

## NEGATIVE TEMP - REACH IN CABINET

- Internal volume = 560 L
- Measurements carried out with hermetic compressors.
- R290 compressor, model AEX433U-FZ

The originally R290 competitor compressor is replaced by an optimized compressor: AEX433U-FZ. The capillary tube, the refrigerant charge, the heat exchangers and the boilers are unchanged.

Thanks to the new AEX compressor characteristics:

- The end user saves **3% of energy cost**
- **The cabinet cooling capacity and the pull down duration are unchanged**

## ► COMPRESSOR MODEL NOMENCLATURE

**C AJ 4 5 18 U - FZ**

### Tension

<b>AA</b>	115V 1~ 60Hz
<b>FZ</b>	220-240V 1~ 50Hz
<b>HZ</b>	208-220V 1~ 60Hz
<b>XA</b>	100V 1~ 50Hz / 115V 1~ 60Hz
<b>DS</b>	115-127V 1~ 60Hz
<b>GS</b>	220V 1~ 50/60Hz

**U = R290**

### Cooling capacity

Corresponding to the two first figures of the cooling capacity expressed in BTU/h.  
In this example total digits 5, with cooling capacity 18 means 18000 BTU/h at 60Hz

**Number of digits** composing the cooling capacity

### Primary application Parameters

**2** = Low / -23.3°C T evap. / +54.5°C T cond. / +32°C RG / +32°C Liquid / Motor starting High

**4** = High / +7.2°C T evap / +54.5°C T cond. / +35°C RG / +35°C Liquid / Motor starting High

**W, X** = Low Medium / -23.3°C T evap. / +54.5°C T cond. / +32°C RG / +32°C Liquid / Motor starting High

**Product range: AJ, AE, HG, TC** (compressor family - first two digits)

**No letter** = single-phase starting torque

**C** = single-phase high starting torque

**T** = three-phase

## ► VTC COMPRESSOR MODEL NOMENCLATURE

**VTC X 4 15 U - MD 5 C**

**Release Variant - C. Cu (Cuprum)**

**Inverter Control - 5. Inverter Driven**

**Voltage (V/RPM) - MD.** 250 / 2500 - 4500

**Refrigerant - U.** R290

### Cooling capacity

Corresponding to the two first figures of the cooling capacity (BTU/h).

In this example total digits 4, with cooling capacity 15 means 1500 BTU/h at 3600 rpm

**Number of digits** composing the cooling capacity

**Cooling Capacity - X.** L/MBP : -35°C to -5°C

**Compressor Family (First 3 digits) : VTC**

## ► CONDENSING UNITS MODEL NOMENCLATURE

**AE 4 4 25 U H**

**H** = High suction pressure (-15°C to + 15°C)

**B** = Low pressure (-40°C to -10°C)

**M** = Medium and high suction pressure (-25°C to +15°C)

**U** = R290

### Cooling capacity

Corresponding to the two first figures of the cooling capacity expressed in BTU/h. In this example total digits 4, with cooling capacity 25 means 2500 BTU/h at 60Hz

**Number of digits** composing the cooling capacity

### Primary application Parameters

**2** = Low / -23.3°C T evap. / +54.5°C T cond. / +32°C RG / +32°C Liquid / Motor starting High

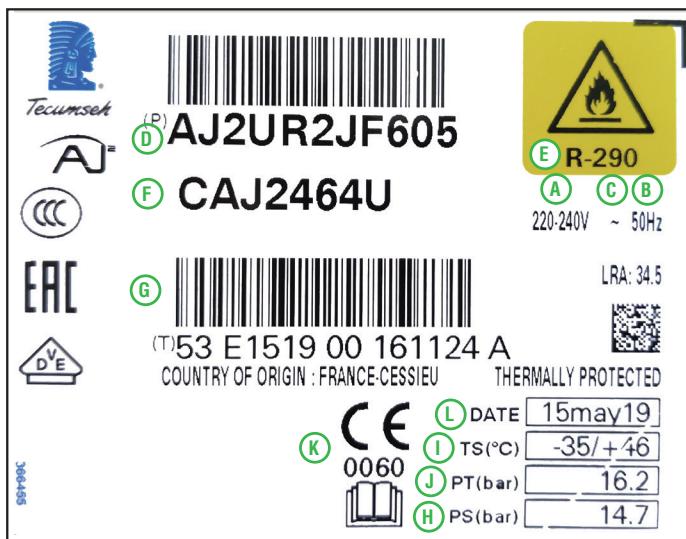

**4** = High / +7.2°C T evap / +54.5°C T cond. / +35°C RG / +35°C Liquid / Motor starting High

**Product range: AE** (compressor family - first two digits)

Compressors or units supplied with oil under nitrogen pressure with suspension clearances.

# TOOLS

## COMPLETE AND EFFECTIVE SELECTION SOFTWARE

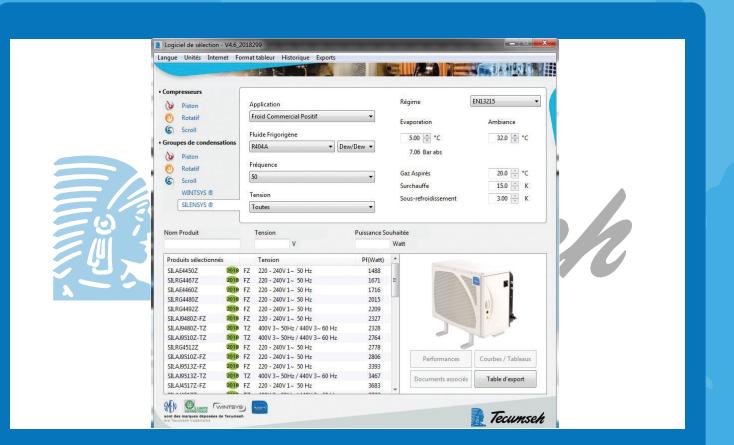

- **Selection of the compressor and/or condensing unit** according to several parameters: cooling capacity, voltage, refrigerant, compressor technology, and according to different modes governed by standards: EN, ARI, CECOMAF etc. or customised conditions (operating pressure, gas return, useful superheating, subcooling, etc.)
- **Performance data and polynomials** for refrigerants R452A, R448A/R449A, R134a, R513A, R1234yf and R290
- Selection of the model according to the **dew temperature or mean temperature**
- Notification of **new models**
- **Obsolete models** identified in a specific tab
- Access to the **documentation** available: technical sheets, acoustic spectrum, electrical drawings, layout, installation instructions, 3D model
- **Export to Excel and Open Office** eases the use of data.
- **Automatic update**
- Available in **7 languages**
- **Network installation** possible

### VERSION 4.5 - May 2019

Download the selection software now, available on the website: [www.tecumseh.com](http://www.tecumseh.com)

## SELECT

## THE CROSS REF SOFTWARE

An ergonomic and functional tool allowing you to **determine the equivalent Tecumseh compressor from a competitor reference.**

An obsolete refrigerant? A Tecumseh model to replace that of a competitor?  
The Cross Ref software is here to help.
